All your resilience and risk needs in a single platform...

Battleground Live provides, in a single platform, the ability to connect the dots for all your risk and resilience needs.

At the core of our powerful platform is a business process module that connects operations to systems, service providers, risks and controls.

Transforming the simulation experience into a learning environment

RISK INTELLIGENCE

Collaborate and participate anywhere

Our simulations can be conducted on site in real time or remotely in multiple locations through the simulation together.

Safe closed online environment

All within a safe closed environment where you can exercise or train a team without worrying about information leakage.

Fully immersive experience

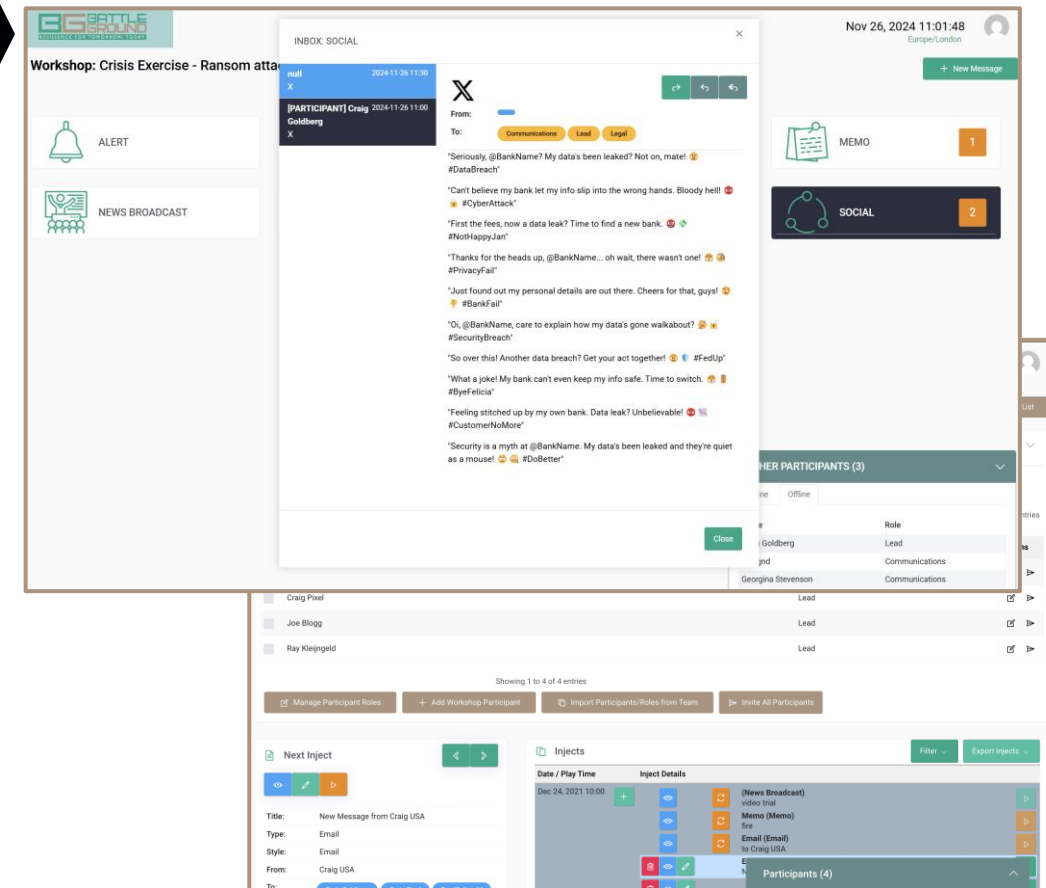

Visuals, videos and media included to create a realistic fully immersive experience during the simulation.

Outcomes and reporting

All outcomes and communications are recorded in the system and can be used for ongoing development and reporting purposes.

Various customisable inject types

Each inject is customisable to specific details, with many inject styles to choose from such as newspaper articles, news broadcasts, social feeds, emails, calls, SMS, memos and alerts.

How we deliver exercises

Planning

- Confirmation of exercise maturity
- Confirmation of exercise context and objectives
- Confirmation of exercise scope and limits

Operating Rhythm

- activation and escalation;
- data gathering, filtering and assimilation;
- roles and responsibilities; and
- Crisis / Incident Management Team operations including meeting cadence, action prioritisation and tracking and data management.

Development

- High level scenario co-development
- Detailed scenario co-development
- Software enabled development of injects and collateral

Decision Making

- decision identification and prioritisation;
- delegation;
- decision making process; and
- contingencies and ongoing attenuation.

Exercising

- Software enabled injects and response
- Evaluate reference and understanding of incident response and risk management documents
- Evaluate participation rates and response to injects
- Actively support and facilitate within session

Communications and Stakeholder Management

- internal communications;
- external communications; and
- stakeholder identification, engagement and management.

Reporting

- Hot debrief in exercise
- Questionnaire to all participants for feedback
- Flash report within 48 hours
- Detailed report - focusing on operating rhythm, decision making and communication

Manage your plans, incidents, people and processes through mobile and web crisis and incident management

Activation & Escalation
– Easily activate your plans and teams including role escalation.

Roles and responsibilities – View and interact with checklists that help you know your role, tasks and actions.

Automated log keeping – every action taken is automatically logged and this running log can be viewed by anyone at any time

Mobile control centre – with a user-friendly interface that tracks actions, assigns tasks and manages incidents.

Communicate – with built in chat messaging, audio and video conferencing.

Understand your business – through an online guided business impact analysis, integrated in real time with your plans.

Reach your team – two-way SMS, email and push messaging to reach your people anytime.

Reporting – in real-time of your BIA information with online Pivot Tables and Charts
