Carbon Neutral ORGANISATION
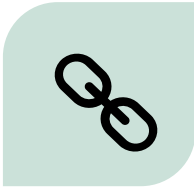

One source of truth
Connect risks, controls, processes, providers and policies in one place.

Board-ready reporting
Live pivots, dashboards and one-click plan or register outputs.

Mobilise in minutes
Trigger from web or mobile with SMS, email and push, with audit-grade logs.

AI that you control
RAiDAR drafts policies and risks, opt-in per record, no model learning.
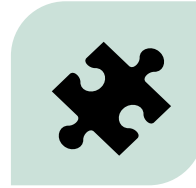

Resilience built in
Process model links operations to systems, providers, risks and controls.

Software plus experts
Platform and consulting together for pragmatic outcomes and quick ROI.

Some of our clients include:

Battleground adds value throughout your entire organisation

Organisations avoid costly failures during incidents caused by inaccurate or incomplete data, protecting financial performance and operational resilience.

Embedding resilience in daily operations saves time and avoids costly crisis failures

High fidelity simulations strengthen leadership confidence and prevent reputational damage

Audit-ready evidence strengthens regulator trust and reduces the risk of non-compliance fines

Instant exports remove days of manual preparation and provide defensible board evidence

Secure incident management tools cut recovery times in half and reduce the cost of downtime
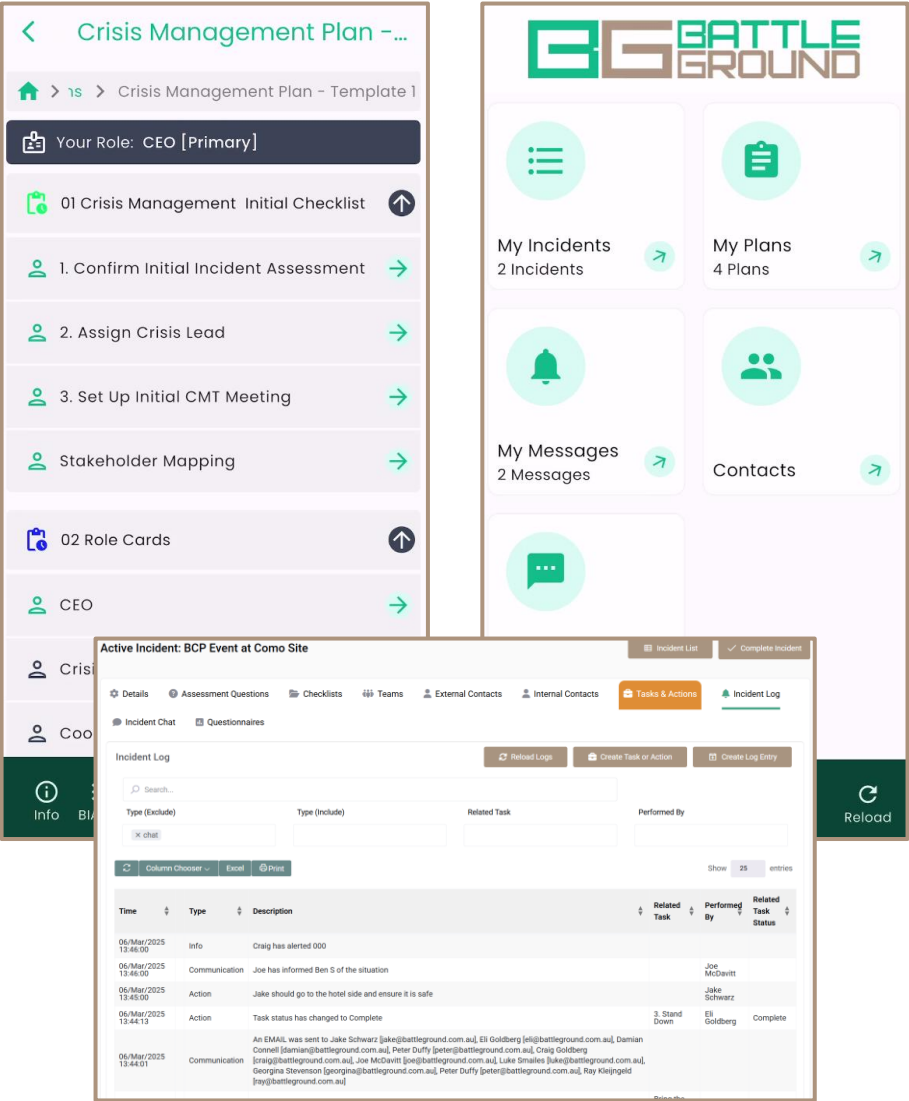

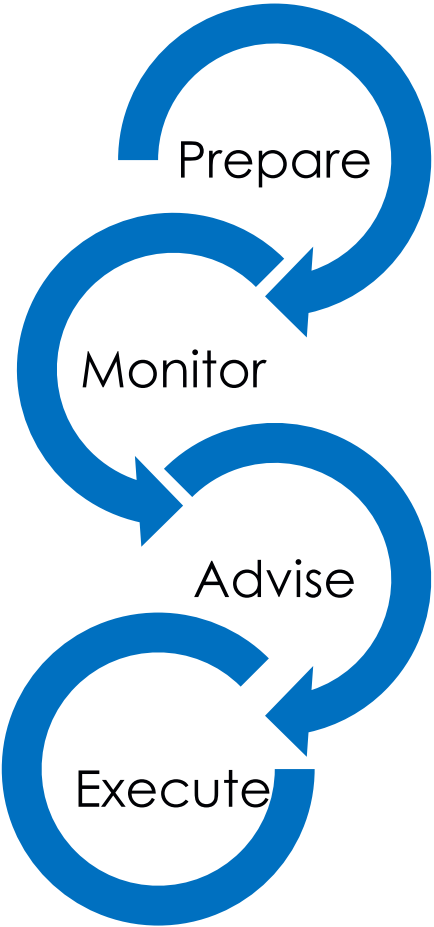

Battleground Live delivers measurable outcomes executives can trust today across every sector
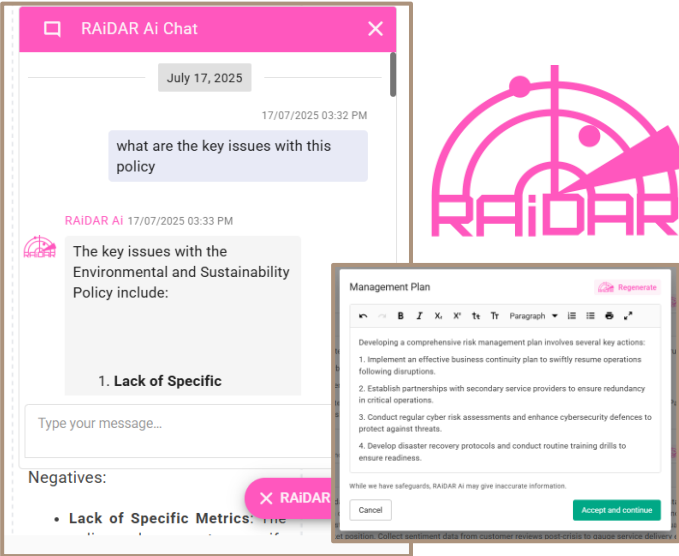

Battleground Live combines software and consulting to ensure adoption, culture change, and ROI, giving organisations measurable outcomes instead of shelfware technology.

Fragmented spreadsheets and outdated documents are eliminated, removing cost, inconsistency, and risk across risk, continuity, and resilience programmes.

Executives present boards and regulators with live dashboards and complete audit trails, reducing risk exposure and improving confidence in resilience.

The measurable results are reduced operational risk, stronger regulator trust, quantifiable labour savings, and a step-change in executive assurance.

what are the key issues with this policy

RAiDAR Ai 17/07/2025 03:33 PM

The key issues with the Environmental and Sustainability Policy include:

1. **Lack of Specific**

Type your message...

Negatives:
- **Lack of Specific Metrics:** The

Management Plan

Developing a comprehensive risk management plan involves several key actions:

1. Implement an effective business continuity plan to swiftly resume operations following disruptions.

2. Establish partnerships with secondary service providers to ensure redundancy in critical operations.

3. Conduct regular cyber risk assessments and enhance cybersecurity defences to protect against threats.

4. Develop disaster recovery protocols and conduct routine training drills to ensure readiness.

While we have safeguards, RAiDAR Ai may give inaccurate information.

Cancel   Accept and continue

Real time dashboards give leaders instant oversight and reduce compliance preparation from weeks to minutes

Dynamic Pivot Reporting

Boards and regulators gain reliable assurance instantly, strengthening governance and building trust that resilience obligations are met.

One-Click BCP & Registers

Executives no longer depend on static reports that are outdated when presented; instead, they access real time dashboards displaying live resilience information.

Interactive Dashboards

Organisations benefit from significant staff time savings, reduced compliance risk, and stronger decision making at every level.

Grid Export & Column Chooser

Compliance preparation that once required weeks of staff effort is now produced in minutes, reducing stress and cost while improving evidence quality.

Reduced regulator reporting from weeks to minutes and cut disruption response time by 55 percent

Energy company reduced incident activation time by 60 percent and improved regulator confidence

A superfund replaced fragmented resilience processes with Battleground Live.

Plans and BIAs were unified, and incidents activated instantly.

Response times improved by fifty five percent, reducing financial risk.

Regulatory reports were generated in minutes, improving compliance efficiency.

Executives gained dashboards that reduced risk and strengthened trust.

A major energy provider centralised resilience processes in Battleground Live.

Incidents were activated instantly with automated tasks assigned and tracked.

Activation times reduced by sixty percent, protecting plant operations.

Audit reporting that previously took weeks was prepared in minutes.

Executives provided regulators with live dashboards, improving trust and compliance outcomes.

Results

- Resilience became embedded as a monthly practice, improving culture and confidence.

- Audit preparation reduced from weeks to hours, cutting compliance costs significantly.

- Executives now provide real time dashboards to regulators, increasing confidence and oversight.
